

# PWP CUSTOM COMMERCIAL Whole Home Water Filtration System

## A Great Solution For Orange County Water

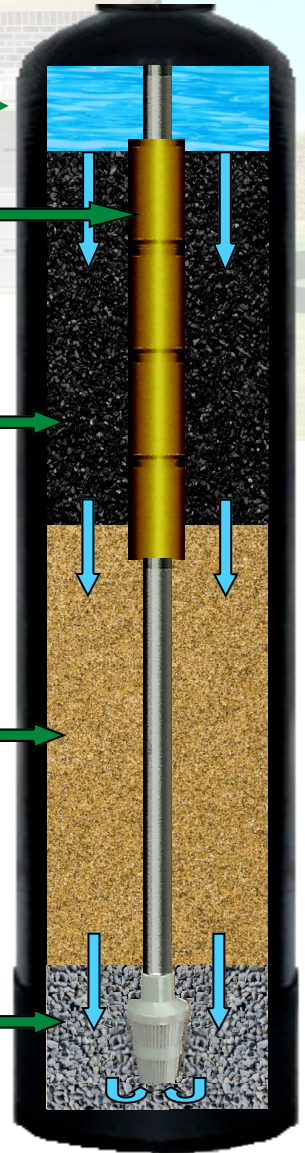

**MediaGuard— KDF 55** is a special patented media that greatly reduces contaminants like bacteria, chlorine and heavy metals in the water using a process called oxidation-reduction (redox).

**Premium Granular Activated Carbon** is derived from bituminous coal. Its high activity and surface area make it ideal for water filtering applications, adsorbing natural organic compounds, taste and odor compounds and synthetic organic chemicals in drinking water treatment. This carbon is of superior grade and is very desirable for drinking water and food grade applications.

**High Grade Chlorine Resistant Resin** acts as an extra level of protection for your home and water. Chlorine resistant resin is specially engineered for use on all chlorinated water supplies. As water travels through the softener, positively charged ions like Calcium, Magnesium, and Iron will stick to the exchange sites on the beads.

**Premium Quartz Gravel** is used as a base for high end filtering systems. Quartz gravel allows the device to correctly backwash and helps assure that larger particulates do not migrate into your filtered water.
